#### PROCEDURE PERFORMED

Colonoscopy

#### INDICATIONS FOR EXAMINATION

Hx of rectal bleed and change in bowel habits

Instruments: CF-100  
Medications: Demerol 150 mg IVP, Versed 0.5C mg IVP  
Visualization: Good Tolerance: Good Complications: None

Extent of Exam: Cecum

Limitations: None

**Procedure Technique:** A physical exam was performed. Informed consent was obtained from the patient after explaining all the risks (perforation, bleeding, infection and adverse effects to the medicine), benefits and alternatives to the procedure which the patient appeared to understand and so stated. The patient was connected to the monitoring devices and placed in the left lateral position. Continuous oxygen was provided with a nasal cannula and IV medicine administered thru a indwelling cannula. After adequate conscious sedation was achieved, a digital exam was performed and the colonoscope introduced into the rectum and advanced under direct visualization to the Cecum.

The Cecum was identified by visual landmarks. The scope was subsequently removed slowly while carefully examining the color, texture, anatomy, and integrity of the mucosa on the way out. In the rectum, the scope was retroflexed to evaluate for internal hemorrhoids and anorectal pathology. The patient was subsequently transferred to the recovery area in satisfactory condition.

The following findings were noted:

#### FINDINGS

Normal colon to the Cecum.

Internal hemorrhoids.

#### ENDOSCOPIC DIAGNOSIS

Normal Colon.

Internal Hemorrhoids.

Irritable Bowel Syndrome.
